

The Dell Tech Regulatory Affairs Group provides professional and efficient registrations for hundreds of International companies.

Do you sell chemical or natural products in the Canadian marketplace? Dell Tech can assist you with the complex regulatory process, avoiding wasted time and potentially costly corrective action. Our confidential preliminary assessment will provide an estimate of time and costs; but more importantly, our technical experts can often advise on the probability of successfully registering your product in Canada.

Dell Tech regulatory and scientific specialists provide professional and efficient registrations for hundreds of International companies. We track the progress of your submission all the way to registration and notify you as soon as your product is registered.

Dell Tech prepares submissions and manages files for:

Pest Management Regulatory Agency (PMRA)

Canadian pesticide registration is a complex process that uses product formulations and extensive test support data to determine the potential risks posed to human health and the environment. Dell Tech regulatory specialists are well versed in the PMRA electronic indexing program and secure web portal to submit your application quickly and efficiently.

Natural and Non Prescription Health Products (NNHPD)

Canadian natural and non-prescription product registration (DIN & NPN) requires complete product submission packages including formulations and supporting test data for licensing. Dell Tech regulatory consultants have prepared submission packages for hundreds of clients all over the globe.

Consumer Product Safety

Dell Tech regulatory consultants assist companies with cosmetic notification form (CNF) completion and submissions which are necessary for all cosmetics sold in Canada. All ingredients are checked against both the Cosmetic Hotlist and Canadian Domestic Substance List, and Dell Tech can review and recommend compliant label and marketing copy claims.

Canadian Food Inspection Agency (CFIA) & Bureau of Chemical Safety (BCS)

CFIA is responsible for fertilizers, supplements, seeds and feed while the BCS voluntarily issues Letters of No Objection for various incidental additive products for use in Food Processing establishments.

New Substances Notification (NSNR) and Existing Substances (CMP)

The Canadian Environmental Protection Act (CEPA) includes the Chemical Management Plan (CMP) and New Substances Notification (NSN) Regulations which ensures all chemical and biological substances existing or proposed for use in Canada have been assessed and found acceptable for their continued import or manufacture.

For 35 years Dell Tech has provided professional, confidential consulting services to the chemical specialty industry in Canada, USA, Europe and Asia.

We can assist your company with North American regulatory compliance including product registration, authoring of Safety Data Sheets (SDS), and laboratory performance testing.
